Chapter 1

Product Description

Introduction

Sound system designs based on the ALS100/L/M Integrated Audio Subsystems are true Plug and Play surround sound systems.

ALS100/L/M Integrated Audio Subsystems bring forth a new age of highly-integrated, single chip sound products. They are cost-efficient audio solutions for motherboard and add-in card implementations. Avance Logic, Inc. has taken the approach of integrating the following functions into a single ASIC.

- Subsystem control logic
- Digital to analog and analog to digital converters
- Mixer functions
- Digital to analog conversion for synthesizer and surround sound functions
- Game/MIDI port (ALS100M requires external circuitry)
- CD-ROM controller (ATAPI IDE - ALS100 and ALS100L/ ATAPI IDE, Sony, Mitsumi, Panasonic, or SCSI II - ALS100M)

By bringing these functions into a single ASIC, the overall product cost is reduced. Additionally, reliability and compatibility are improved by the reduced number of components required to build a sound system.

ALS100/L/M Integrated Audio Subsystems fully support the ISA Plug and Play standard. For non-ISA Plug and Play compatible systems, a software utility is available that sets the IRQ and DMA addresses. Add-in sound cards and motherboard implementations designed around the ALS100/L/M Integrated Audio Subsystems are completely jumper and switch free.

ALS100/L/M Integrated Audio Subsystems support the following functions:

- Audio Input
 - CD-ROM Audio
 - Monaural In
 - Stereo Line In
 - Microphone In
- Audio Output
 - Stereo Line Out
 - Stereo Main/Surround Sound Out
- Game/MIDI Port (ALS100M requires external circuitry)
 - External MIDI input and output
 - Joystick input
- FM/Wavetable
 - Optional Yamaha OPL3 FM synthesizer
 - Optional Yamaha OPL4 Wavetable synthesizer
- CD-ROM Controller
 - ATAPI IDE
 - Sony (ALS100M only)
 - Panasonic (ALS100M only)
 - Mitsumi (ALS100M only)
 - SCSI External Controller Input (ALS100M only)

Support for the SCSI CD-ROM is provided by the built-in support for an external SCSI controller and support for the FM and the wavetable synthesizers is provided by the built-in support for external Yamaha OPL3 FM synthesizer and Yamaha OPL4 Wavetable synthesizer ASICs.

Hardware Features

- Single, mixed-signal, high performance VLSI sound ASIC
- Six software selectable DMA lines (0, 1, 3, 5, 6, 7)
- Seven software selectable interrupt lines (5, 7, 9, 10, 11, 12, 15)
- 8-bit ISA Plug and Play bus interface
- 8-bit or 16-bit CD-ROM interface
- 8-bit or 16-bit DMA interface with FIFO
- Game port
- MIDI port with input and output FIFO
- 8-bit or 16-bit mono/stereo digital audio from 4 kHz to 48 kHz
- Full duplex for concurrent recording and playback
- 16-bit Type F ISA DMA interface

Built-in Functional Blocks

- ISA Plug and Play support logic and resource ROM
- High speed 16-bit digital to analog and analog to digital converters with filters
- Yamaha OPL3/4 FM/Wavetable Synthesizer address decode
- Digital to analog converter to support external FM/wavetable synthesis
- Thirty-two level stereo audio mixer with six input sources (DAC, synthesizer, monaural in, microphone in, line in, and CD audio)
- Built-in amplifier for the microphone input
- ADPCM decompression engine
- High speed 8-bit or 16-bit DMA interface with FIFO
- MPU-401 MIDI controller with FIFO
- CD-ROM controller

Software Support

- Windows 3.1
- Windows 95
- Windows NT 3.5 (future release)
- Windows Sound System
- OS/2 Warp (future release)
- All DOS based games

Compatibility

- Adlib
- All Sound Blaster Pro applications
- All Sound Blaster 16 applications
- Yamaha OPL3 FM Synthesizer
- Yamaha OPL4 Wavetable Synthesizer
- MPU-401 UART MIDI

Applications

- 16-bit stereo sound cards
- PC motherboard based sound systems
- PC Notebook sound systems (ALS100L)
- MIDI controller
- Game port
- CD-ROM controller
- Wavetable card support

Emulation

- Sound Blaster Pro
- Sound Blaster 16
- Sound Blaster ADPCM
- MPU-401 UART MIDI interface

External Support

- Yamaha OPL3 FM Synthesizer
- Yamaha OPL4 Wavetable Synthesizer
- SCSI II CD-ROM controller

Connector Support

- Wavetable Connector
 - Wavetable cards
- Game/MIDI Port (ALS100M requires external circuitry)
 - External MIDI input and output
 - Joystick
- Audio Out
 - Stereo Line Out
 - Main/SS Out
- Audio In
 - CD-ROM Audio
 - Stereo Line In
 - Microphone In
 - Monaural In
- CD-ROM Control
 - ATAPI IDE
 - Sony (ALS100M only)
 - Mitsumi (ALS100M only)
 - Panasonic (ALS100M only)
- SCSI II CD-ROM (ALS100M only)
 - External controller required

Design Example/Manufacturing Kit

Design Example/Manufacturing Kit

To facilitate the design process, working design examples (AS9520, AS9521, AS9540, and AS9548 sound cards) are available for four of the five ALS100/L/M sound system designs. The AS9520, AS9521, and AS9540 sound cards are design examples for the AS9520, AS9521, and AS9540 sound system designs. The AS9548 sound card is a design example for the AS9538 sound system design. No design example is currently available for the AS9545 sound system design. Additional information about the PC motherboard implementation of the ALS100/M sound system design and the PC Notebook implementation of the ALS100L sound system design is available later in this manual. The design examples are made available to OEMs for design troubleshooting or as an FCC Class B certified manufacturing kit. The Design Example/Manufacturing Kit consists of the following items.

- ALS100/L/M Design Manual
- Assembled and tested AS9520, AS9521, AS9540, or AS9548 sound card
- FCC number
- Technical documentation on diskette (FrameMaker 4 format)
- Gerber files for use in producing film
- Schematics
- Driver object code
- Diagnostic and manufacturing test programs
- Benchmark test results
- Compatibility Test Report
- Quality Control Report

The following chapters contain information that can be used for design and cost analysis before obtaining a Design Example/Manufacturing Kit and committing to an ALS100/L/M based design.

Evaluation Sound Cards

Introduction

There are five evaluation sound cards. Currently four are available. The sound cards differ in the sound system design that they embody.

AS9520 Sound Card Description

The AS9520 sound card is an example of the AS9520 sound system design and is intended for the evaluation of that design.

The AS9520 sound system design is based on the ALS100 Integrated Audio Subsystem ASIC and contains the following features.

- 16-bit ISA Plug and Play design
- ATAPI IDE CD-ROM interface
- Game/MIDI port
- Audio inputs from:
 - External Wavetable card
 - ATAPI IDE CD-ROM audio
 - Mitsumi CD-ROM audio
 - Sony CD-ROM audio
 - Microphone
 - Line In
- Audio Outputs to:
 - Line Out
 - Main/SS Speaker Out
- Yamaha OPL3 FM Synthesizer
- Wave Blaster compatible upgrade capability

The AS9520 sound card is constructed on a 4-layer printed circuit board measuring 6.25 inches by 4.0 inches.

AS9521 Sound Card Description

The AS9521 sound card is an example of the AS9521 sound system design and is intended for the evaluation of that design.

The AS9521 sound system design is based on the ALS100M Integrated Audio Subsystem ASIC, the multiple CD-ROM input version of the ALS100, and contains the following features.

- 16-bit ISA Plug and Play design
- CD-ROM interfaces for:
 - ATAPI IDE CD-ROM
 - Mitsumi CD-ROM
 - Sony CD-ROM
 - Panasonic CD-ROM
- SCSI CD-ROM external controller interface
- Game/MIDI port
- Audio inputs from:
 - External Wavetable card
 - ATAPI IDE CD-ROM audio
 - Mitsumi CD-ROM audio
 - Sony CD-ROM audio
 - Panasonic CD-ROM audio
 - Microphone
 - Line In
- Audio Outputs to:
 - Line Out
 - Main/SS Speaker Out
- Yamaha OPL3 FM Synthesizer
- Yamaha OPL4 Wavetable Synthesizer
- Wave Blaster compatible upgrade capability

The AS9521 sound card is constructed on a 4-layer printed circuit board measuring 8.25 inches by 4.0 inches.

AS9540 Sound Card Description

The AS9540 sound card is an example of the AS9540 sound system design and is intended for the evaluation of that design.

The AS9540 sound system design is based on the ALS100 Integrated Audio Subsystem ASIC and has the lowest implementation cost of all of the sound system designs. The AS9540 sound system design contains the following features.

- 16-bit ISA Plug and Play design
- ATAPI IDE CD-ROM interface (optional)
- Game/MIDI port
- Audio inputs from:
 - External Wavetable card
 - ATAPI IDE CD-ROM audio
 - Mitsumi CD-ROM audio
 - Sony CD-ROM audio
 - Microphone
 - Line In
- Audio Outputs to:
 - Line Out
 - Main/SS Speaker Out (optional)
- Yamaha OPL3 FM Synthesizer
- Wave Blaster compatible upgrade capability

The AS9540 sound card is constructed on a 2-layer printed circuit board measuring 6.5 inches by 4.0 inches.

AS9545 Sound Card Description

Hardware implementation of the AS9545 sound card is not currently available. The following functional description and reference to this sound card elsewhere in this manual are for informational use only.

The AS9545 sound card is an example of the AS9545 sound system design and is intended for the evaluation of that design.

The AS9545 sound system design is based on the ALS100 Integrated Audio Subsystem ASIC and contains the following features.

- 16-bit ISA Plug and Play design
- ATAPI IDE CD-ROM interface
- Game/MIDI port
- Audio inputs from:
 - External Wavetable card
 - ATAPI IDE CD-ROM audio
 - Mitsumi CD-ROM audio
 - Sony CD-ROM audio
 - Microphone
 - Line In
- Audio Outputs to:
 - Line Out
 - Main/SS Speaker Out
- Yamaha OPL3 FM Synthesizer
- Yamaha OPL4 Wavetable Synthesizer
- Wave Blaster compatible upgrade capability

The AS9545 sound card is constructed on a 4-layer printed circuit board measuring 6.25 inches by 4.0 inches.

AS9548 Sound Card Description

The AS9548 sound card contains an example of the AS9538 sound system design and is intended for the evaluation of that design. The AS9538 sound system design is intended for use in PC Notebooks (see “AS9538 PC Notebook Sound System Design” on page 19). The AS9548 sound card has circuitry in addition to the AS9538 sound system design so that it can operate in a standard PC for a more convenient evaluation platform.

The AS9538 sound system design is based on the ALS100L Integrated Audio Subsystem ASIC, the 3.3 V input voltage version of the ALS100, and contains the following features.

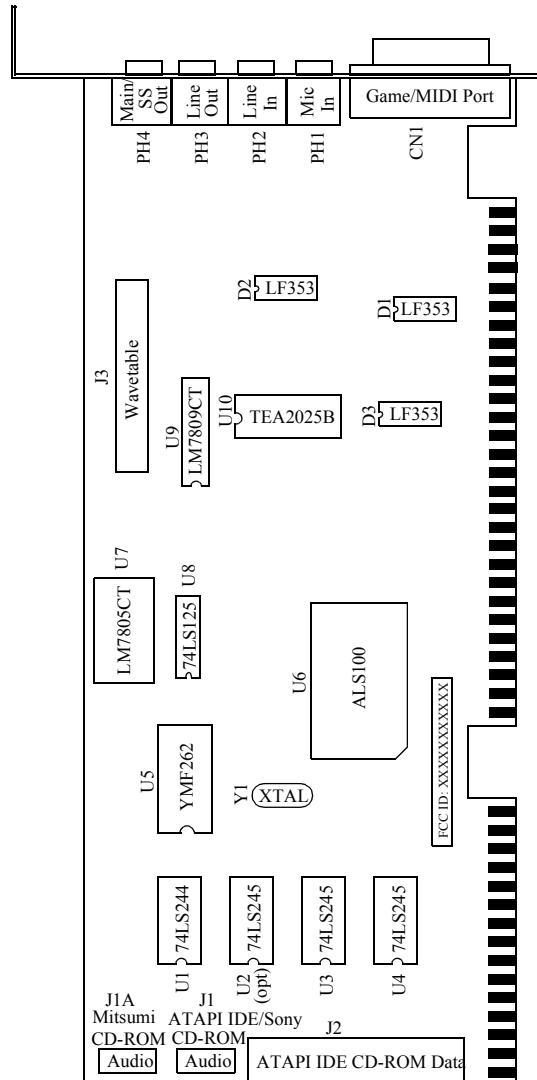

- 16-bit ISA Plug and Play design
- Game/MIDI port
- Audio inputs from:
 - ATAPI IDE CD-ROM audio
 - Sony CD-ROM audio
 - Microphone
 - Line In
- Audio Outputs to:
 - Line Out
 - Speaker Out
- Yamaha OPL3 FM Synthesizer

The AS9548 sound card is constructed on a 2-layer printed circuit board measuring 6.25 inches by 4.0 inches.

PC Motherboard Integration

AS9539 PC Motherboard Sound System Design

The AS9539 sound system design is based on the ALS100 Integrated Audio Subsystem ASIC and is a 16-bit ISA Plug and Play design with a Game/MIDI port, audio inputs from IDE and Mitsumi CD-ROM audio connectors, a Wavetable connector, and Microphone In and Line In jacks, and an output from a Line Out jack. The AS9539 sound system design contains a Yamaha OPL3 FM synthesizer and has Wave Blaster compatible upgrade capability.

The AS9539 sound system design includes the Audio I/O and Game/MIDI Port riser card. The riser card contains jacks for Microphone In, Line In, and Line Out and a connector for the Game/MIDI port and plugs onto the motherboard.

PC Notebook Integration

AS9538 PC Notebook Sound System Design

The AS9538 sound system design is based on the ALS100L Integrated Audio Subsystem ASIC, the 3.3 V input voltage version of the ALS100. It is a 16-bit ISA plug and play design with a Game/MIDI port, audio inputs from an ATAPI IDE CD-ROM audio connector and Microphone In and Line In jacks, and outputs from Line Out and optional Speaker Out jacks. The AS9538 sound system design contains a Yamaha OPL3 FM synthesizer.

The AS9548 sound card contains an example of the AS9538 sound system design and is intended for the evaluation of that design (see “AS9548 Sound Card” on page 6 and “AS9548 Sound Card Design” on page 16). The AS9548 sound card has circuitry in addition to the AS9538 sound system design so that it can operate in a standard PC for a more convenient evaluation platform.

AS9538 Part Descriptions

Item	Description	Part Number	Vendor
1	Integrated audio subsystem ASIC	ALS100L	Avance Logic, Inc.
2	OPL 3 (low voltage)	YMF289B-S	Yamaha
3	8-pin SOP 1/2 W power amplifier	LM4861	National Semiconductor
4	8-pin SOP OP amplifier	LF353	Texas Instruments
5-14	0805 SMD resistor		Note 2
15-17	8-pin ISO SIP resistor network		Note 3
18-21	0805 SMD capacitor		Note 4
22	16 V radial electrolytic capacitor		Note 5
23-26	0805 SMD capacitor		Note 4
27	16 V tantalum capacitor		Note 6
28	16 V radial electrolytic capacitor		Note 5
29	3.3 V thru-hole zener diode	1N5226BPH	Philips Semiconductor
30,31	Epoxy thru-hole inductor	Series 1641	Delevan
32	4-pin audio connector (.1 in) (Sony/IDE)	22-28-4043	Molex
33	SJ-100 5-pin phone jack	SJS-0349A-5P	Shogyo
34	D-sub 15-pin female connector	2-145782-4	AMP
35	33.8688 MHz series crystal	**TBD**	**TBD**

Notes:

1. Except for Item 1, equivalent parts may be substituted for all items.
2. 1/10 W, 5%, 150 V
3. 1/5 W, 2%, 50 V
4. $\pm 5\%$, 50 V
5. $\pm 20\%$, 16 V
6. $\pm 10\%$, 16 V
