

Appendix III

FAN-II: *SMART* Technology Upgrade Kit

FAN-II

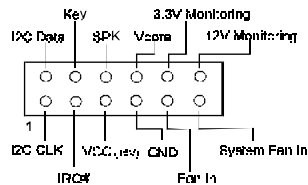

System Monitor Software for Win95

The FAN-II upgrade kit provides a PC self-diagnostic capability called the *SMART* (System Monitoring and Alerting) technology.

Features

- Detects four on-board voltages (CPU Core Voltage, 3.3V, 5V, 12V)
- Two fan speed sensing
- One precise CPU temperature sensor and one chassis temperature sensor
- Four types of speaker-driver signal output
- Supports Shepherd system monitor software (Optional)
- EISCA v1.0 compliant

FAN-II Connector
